APPENDICES

1. Introduction and Background

Yakima County owns and operates the Cheyne Landfill (CLF), located approximately five miles north of Zillah, Washington at 4970 Cheyne Road, Zillah, Washington 98953 (See Figure 1-1). The landfill is located on a 960-acre site and has been operated by the County since 1972. The design capacity of CLF is currently 8.2 million tons (7.44 million Mega grams [Mg]), which includes the recently permitted landfill expansion (Cell #2).[1] Yakima Regional Clean Air Agency (YRCAA) issued Order of Approval NSRP-27-CLF-08 for the expansion of CLF on August 19, 2009.

A Title V Air Operating Permit (AOP) is required for facilities with emissions of regulated pollutants exceeding 100 tons per year, emissions of hazardous (HAP) air pollutants exceeding 25 tons per year collectively, or 10 tons per year of a single HAP. CLF does not have the potential to exceed the regulated pollutant or HAP emission rate thresholds for the Title V program (WAC 173-401). However, CLF is subject to New Source Performance Standard (NSPS) Subpart WWW (Municipal Solid Waste Landfills). Based upon the current design capacity of the MSW landfill (7.44 million Mg), CLF is subject to additional NSPS Subpart WWW requirements, including the requirement to obtain a Title V AOP. [2]

R.W. Beck has retained ENVIRON International Corporation (ENVIRON) to prepare this initial Title V Air Operating Permit application on Yakima County's behalf. This application presents the information required by WAC 173-401-510 and YRCAA Regulation 1, Section 4.04, and information certification required by WAC 173-401-520. A completed set of standard Title V Air Operating Permit application forms is included in Appendix A.

[1] Amended Design Capacity Report – Letter correspondence from Joel Miller, R.W. Beck to Hasan Tahat, YRCAA on January 20, 2010.
[2] 40 CFR 60.752(b)

2. Facility and Process Description

CLF is located approximately five miles north of Zillah, Washington in Yakima County (location map, Fig. 1-1). CLF is located in an area classified as attainment or unclassifiable for all Federal and State ambient air quality standards. Figure 2-1 provides a plot plan of CLF depicting MSW cell boundaries and the facility property boundary.

2.1 Physical Description

In general, landfill design involves grading and surface preparation to create a suitable surface at an appropriate depth and placing solid waste in lifts within the landfill phase footprint. Each lift is covered with daily cover soil and with a more extensive operating surface cover at the top of the lift. When final height is reached, each phase of the landfill is placed under final cover.

Over time landfill gas (LFG) is generated by the buried waste, when organic material is decomposed by various bacteria, which generates primarily carbon dioxide (CO_2) and methane (CH_4), but also smaller concentrations of nitrogen (N_2), oxygen (O_2), non-methane organic compounds (NMOCs), and various other constituents.

2.2 Process Description

The CLF is open seven days a week, with business hours from 9 am – 5 pm (Monday – Saturday) and 12 pm – 5 pm on Sunday. The primary activity of CLF is the acceptance and deposition of MSW from residents of Yakima County through independent collectors (roadside pick-up) and resident self-haulers. Yakima County uses scales to quantify the weight of MSW accepted at the CLF.

Yakima County accepts yard and wood waste separate from MSW at CLF. By accepting yard and wood waste at the landfill, Yakima County residents have an easy way to dispose of yard waste. Periodically, a portable yard waste grinder is brought on-site to reduce the material size and generate chipped yard waste and wood chips. Chipped yard waste is available free to the public, or used at the landfill for daily cover. Yakima County is currently planning a ban on disposing of yard debris in all public and private landfills by January 1, 2012.[3]

Appliances are accepted at CLF in a specified area and decommissioned by a certified technician. Any chlorinated fluorocarbons (CFCs) and waste oil removed from the appliances are taken to the Household Hazardous Waste Facility at Terrace Heights Landfill. The decommissioned appliances are then shipped off-site for recycling. Waste tires are also accepted at CLF and temporarily stored until they are shipped off-site by vendors. Yakima County operates a series of septage evaporation ponds at CLF. In the future, Yakima County will also be accepting material containing asbestos at CLF.

[3] Yakima County Solid and Moderate Risk Waste Management Plan (June 2010), Page 5-15.

3. Emission Sources and Estimates

There are several sources of air pollutant emissions from the landfill. The emission sources discussed here concern those associated with the waste itself and the steps taken to get it in place. These include the fugitive LFG emissions from the surface of the landfill and various insignificant emission activities that generate fugitive dust (roadways, handling landfill cover material, and compacting/dozing). Potential emissions of criteria pollutants, HAPs, and toxic air pollutants (TAPs) for the landfill are presented in Form C-2 of Appendix A. Landfill operations that generate only fugitive emissions are considered Insignificant Emission Units by WAC 173-401 530(1)(d), and not included in the Title V application emission-related information. Detailed emission rate calculations for all non-insignificant emission units are presented in Appendix B.

3.1 Fugitive LFG

R.W. Beck provided ENVIRON with annual LFG production rates for CLF, based on the EPA's LandGEM model and MSW acceptance rates (past actual and projections). The LandGEM model estimates annual LFG production rates over the life of a landfill and includes AP-42 Section 2.4 (Municipal Solid Waste Landfills) default pollutant concentrations for the LFG. The EPA LandGEM model report for the estimated life of the landfill is also provided in Appendix B. ENVIRON updated the NMOC concentration in LFG to 425 parts per million by volume (ppmv) as hexane, compared to EPA's default NMOC concentration of 4,000 ppmv, based on recent Tier II testing conducted at CLF.[4]

3.2 Landfill Operation Activities

There are fugitive dust emissions associated with the movement of materials and personnel with heavy equipment. Fugitive dust from equipment is a function of the amount of MSW handled in any given year and emission factors developed using EPA's AP-42 reference document for fugitive emission sources. As provided by WAC 173-401-510(2)(c)(i), emission rates from insignificant emission units are not included with this AOP application.

[4] Cheyne Landfill Tier 2 NMOC Emission Rate Report – Letter correspondence from Joel Miller, R.W. Beck to Hasan Tahat, YRCAA on July 1, 2010.

4. Potentially Applicable Regulations

The CLF is subject to federal, state, and local air pollution control regulations. This section discusses each applicable regulation and details why other potentially applicable federal and state regulations are not applicable. A complete listing of the applicable federal, state, and local air quality regulations; requirements established in the facility's Cell #2 Expansion Order of Approval; and additional information regarding the applicability determinations is included as Form C-3 in Appendix A. A complete list of inapplicable regulations is included in Appendix C.

4.1 Federal Requirements

4.1.1 Maximum Achievable Control Technology

EPA established National Emission Standards for Hazardous Air Pollutants (NESHAP) under 40 CFR part 63 to regulate HAP emissions. This regulatory program specifies maximum achievable control technology (MACT) for source categories. Applicability of these MACT standards hinges on the type of source, as well as the source's status as a major source. Part 63 defines a "major source" as any facility that has the potential to emit more than 10 tons per year of a single HAP or more than 25 tons per year of all HAPs combined.

The highest single HAP potential to emit at the CLF is Xylene, at 1.4 tons per year. Overall, the CLF has a combined potential to emit of 11.3 tons per year for all HAPs. As a result, the landfill is not considered a "major source" with respect to the part 63 NESHAP program.

On January 16, 2003, EPA promulgated the MSW Landfill NESHAP (40CFR63, Subpart AAAA). The MSW Landfill NESHAP applies if CLF is a major source of HAPs, be co-located with a major source of HAPs, or have a design capacity greater than 2.5 million Mg and have uncontrolled NMOC emissions equal to or greater than 50 Mg per year. As discussed above, the landfill is not a major source of HAP emissions nor collocated with a major source of HAPs. Current NMOC emissions (10 Mg per year) are less than the 50 Mg per year threshold. Therefore, CLF is not currently subject to the MSW Landfill NESHAP. Yakima County will continue to evaluate the applicability of this NESHAP as part of its annual/5-year NMOC emission rate calculations.

On April 5, 1984, EPA promulgated the Asbestos NESHAP (40CFR61, Subpart M) which applies to numerous asbestos related activities, including asbestos waste disposal. The CLF is a waste disposal facility that will receive asbestos containing materials in the future; therefore, the landfill is subject to this NESHAP.

The Stationary Reciprocating Internal Combustion Engine NESHAP (40CFR63, Subpart ZZZZ) became effective on June 15, 2004. The NESHAP applies to all existing, new, or reconstructed stationary reciprocating internal combustion engine (RICE). No RICE is currently operated at CLF. The yard waste grinder that is periodically transported to the landfill uses a non-road engine (defined by 40CFR1068.30), which is not considered a stationary RICE under 40CFR63.6585(a).

4.1.2 New Source Performance Standards

EPA established New Source Performance Standards (NSPS) for new, modified, or reconstructed source categories that are specified in 40 CFR Part 60. These NSPS usually represent a minimum level of control that is required of a new source.

On March 12, 1996, EPA promulgated the MSW Landfill NSPS (40CFR60, Subpart WWW). The NSPS applies to each MSW landfill that commenced construction, reconstruction, or modification on or after May 30, 1991. The NSPS requires MSW landfills with a design capacity equal to or greater than 2.5 million Mg and 2.5 million cubic meters to report NMOC emissions. Additional requirements are triggered when calculated uncontrolled NMOC emissions exceed 50 Mg per year.

Yakima County submitted the *Amended Design Capacity Report and Tier I NMOC Emission Rate Report* to YRCAA on January 20, 2010. The initial NMOC emission rate report listed the NMOC emission rate as 94 Mg/yr using the default variable values listed in 40 CFR 60.754(a)(1)(i). Subsequently, Yakima County measured NMOC concentrations at CLF using Tier 2 methods (40 CFR 60.754(a)(3)) during May 3 – 7, 2010. The *Tier 2 NMOC Emission Rate Report* was submitted to YRCAA on July 1, 2010 presenting updated calculations of total NMOC emissions of 10 Mg/yr and 12.5 Mg/yr for calendar years 2010 and 2015.

The Stationary Compression Ignition Internal Combustion Engine NSPS (40CFR60, Subpart IIII) applies to stationary compression ignition internal combustion engines that commence construction after July 11, 2005 and were manufactured after April 1, 2006. No stationary compression ignition engines are currently operated at CLF. The yard waste grinder that is periodically transported to the landfill uses a non-road engine (defined by 40CFR1068.30). As defined in 40 CFR 60.4219: "... a stationary compression ignition engine is not a non-road engine..." Therefore, NSPS Subpart IIII is not applicable to the non-road engine.

4.1.3 Prevention of Significant Deterioration

EPA established the Prevention of Significant Deterioration (PSD) program to ensure that new or expanded sources do not cause a significant deterioration in the air quality of areas that currently meet applicable ambient air quality standards. Potential annual emissions of regulated NSR pollutants from the CLF are less than the general source major source definition threshold (250 tons/yr), therefore the PSD permitting program does not currently apply to the facility.

4.1.4 Title IV Acid Rain Provisions

Title IV of the federal Clean Air Act regulates SO_2 and NO_x emissions from fossil fuel-fired electrical generation facilities. The landfill is not subject to the requirements of the Acid Rain Program because it neither generates nor sells electricity.

4.1.5 Title V Operating Permit

Title V of the federal Clean Air Act requires facilities with the annual potential to emit more than 100 tons of a regulated criteria pollutant, 10 tons of a single HAP, or 25 tons of all HAPs combined to obtain a Title V Operating Permit. Cheyne Landfill does not have the potential to exceed regulated pollutant or HAP emission rate thresholds. However, Cheyne Landfill is subject to NSPS subpart WWW. As part of the NSPS subpart WWW (described in section 4.1.2 above), Cheyne Landfill becomes subject to the requirements of the Title V Air Operating Permit (AOP) program, and requires the submittal of an AOP application within 12 months of commencing construction on the CLF expansion.

4.1.6 Compliance Assurance Monitoring

The 40 CFR part 64 Compliance Assurance Monitoring (CAM) program applies to pollutant specific emission units that employ an active control device to achieve compliance with an enforceable emission limit. 40 CFR 64.2 establishes the three applicability criteria for the CAM program:

- The unit is subject to an emission limit,
- The unit uses a control device to achieve compliance with that limit, and
- The unit has pre-control emissions ≥ 100 percent of the major source threshold.

CAM requirements do not apply to CLF because the facility does not currently have any kind of pollution control device and because pre-control emissions are less than major source thresholds.

4.2 State Requirements

4.2.1 Notice of Construction Permits

Washington State requires new or modified industrial sources to obtain a NSR air quality permit. The NSR permit application must provide a description of the project, an inventory of pollutant emissions, and proposed control systems for the applicable pollutants. The reviewing agency considers whether BACT has been employed and evaluates ambient concentrations resulting from these emissions to ensure compliance with ambient air quality standards. As stated in WAC 173-400-113, a NSR permit cannot be granted unless the agency determines the project (1) will meet applicable state and federal emission limits; (2) will employ BACT; and (3) will not cause or contribute to violations of ambient air quality standards or TAP increments.

Washington State and the YRCAA require authorization via permit prior to construction or modification of non-exempt air contaminant emission sources. This notice of construction program is administered in Yakima County by the YRCAA. YRCAA NSRP-27-CLF-08 incorporates requirements for the CLF expansion project and is presented herein as applicable requirements. Yakima County will continue to comply with the requirements of the YRCAA

permitting regulation, and will submit a new source review (NSR) application before constructing any new sources or modifying any existing sources for which permit approval would be required.

4.2.2 Air Operating Permit

Please see discussion of the federal Title V Air Operating Permit program in Section 4.1.5.

4.2.3 General Requirements

Procedural requirements, prohibitive limitations, and general emission standards applicable to the subject facility via the YRCAA Regulation and Washington Administrative Code are included in this application in Form C-3 of Appendix A.

5. Compliance Certification

Form C-3 in Appendix A provides a summary of regulations applicable to the landfill. Form C4 assesses Yakima County's current compliance status for each applicable requirement. The CLF is currently in compliance with all applicable air quality regulations.

WAC 173-401-510(2)(i)(iii) mandates that the applicant provide a schedule for submitting future compliance certifications during the Title V permit term. Yakima County proposes to submit a compliance certification once annually and that this schedule corresponds with the calendar year. As such, Yakima County proposes that each annual certification period will start January 1 and end December 31 of each year, and that the annual certification will be submitted within 105 days after the end of the calendar year. Yakima County proposes to submit the CLF's first annual compliance certification 105 days after the end of the calendar year the Title V permit is issued.

WAC 173-401-615(3) mandates semi-annual reporting of all required monitoring as well as permit deviations. Yakima County proposes that the semi-annual reporting periods end June 30 and December 31 of each year and that the semi-annual reports will be submitted within 105 days of the end of each reporting period. Yakima County will combine the annual compliance certification with the second semi-annual monitoring report of each year.

6. Compliance Plan and Schedule

The CLF is currently in compliance with all applicable air quality requirements. The facility will monitor its future compliance using the methods for compliance demonstration described in Form C-3 in Appendix A.

Yakima County is not aware of any potentially applicable federal or state requirements other than greenhouse gas regulations, which will become effective during the term of the Title V operating permit. However, if any applicable requirements take affect during the facility's Title V operating permit term, Yakima County will meet the applicable requirement as expeditiously as possible. If an applicable requirement with a specific timeline for compliance becomes effective during the permit term, Yakima County will comply with the requirement on the schedule established by the requirement.

APPENDICES

APPENDIX A

YRCAA Air Operating Permit Application Forms

Form A-1: General Information and Certification

1. Company Name: Yakima County Public Services – Solid Waste Division
2. Plant or Facility Name: Cheyne Landfill
3. Unified Business Identification Number (UBI#): 91-6001387
4. Facility Address: 4970 Cheyne Road
   City: Zillah, Washington
5. Mailing Address: (if different than the above) 7151 Roza Hill Drive, Yakima, Washington 98901
6. Owner: Yakima County Solid Waste Division
   Parent Company: Not Applicable
7. Facility contact who is familiar with the information contained in this application.
   Name: Wendy Mifflin
   Title: Solid Waste Manager
   Telephone: (509) 574-2450
8. Type of operating permit application: (check all that apply)

   ; Initial permit application — Permit modification application
   — Renewed permit application — Other (specify):

9. Reason for Application: Required by New Source Performance Standard, Subpart WWW (40CFR60.752(b)) based on design capacity of Cheyne Landfill.

10. Claim of Confidentiality:

    Some of the records and information contained in this application (check one) are ; **are not** unique to the applicant and/or are likely to adversely affect the competitive position of the applicant if released to the public or a competitor. If a claim of confidentiality is made for this application, provide a separate application for general distribution which is devoid of confidential information.

11. Certification:

    I certify that I am the responsible official, as defined in WAC 173-401-200(27) for this facility. I further certify as required by WAC 173-401-520, that, based on information and belief formed after reasonable inquiry, the statements and information in this application are true, accurate, and complete.

Signature of Responsible Official Date Title
Printed Name: Wendy Mifflin
Title: Solid Waste Manager
Phone Number: 509-574-2455
Mailing Address: 7151 Roza Hill Drive, Yakima, Washington 98901

Notes:
a – Annual Potential Emission Rates based on projected annual LFG acceptance rates and LFG production in year 2040.

Form C-2: Regulations and Regulated Emissions

Facility Name: Cheyne Landfill
Process #: 3 (Cell #2 of Landfill)

Discharge Point #	Generation Point #	Emissions (lb/yr)			Compliance Assurance Monitoring (CAM)		Attachment #
		Pollutants or Regulatory Requirement	Annual Potential Emissions a	2009 Actual Emissions b	Potential Emissions without regard to control Device	CAM needed? (yes or no)	
1	1	Acrylonitrile	57.3	--	57.3	No	--
1	1	Hydrogen sulfide	162.5	--	162.5	No	--
1	1	Vinyl chloride	45.7	--	45.7	No	--

Notes:

a – All annual potential emission rates for Cell #2 are included in emission calculations for the entire MSW landfill (presented in Process #2 table above). The NSR permit for Cell #2 (NSRP-27-CLF-08) has specific emission limits for three toxic air pollutants emitted by Cell #2 (acrylonitrile, hydrogen sulfide, and vinyl chloride). The potential emission rates presented in this table represent the permit emission limits for Cell #2.

b – Cell #2 at Cheyne Landfill is currently under construction and has not accepted any MSW.

NSRP-27-CLF-08, Condition 5.6	In	Continuous	Administrative

- The source shall continue to comply with all applicable requirements with which it is currently in compliance.
- The source shall meet applicable requirements on a timely basis that become effective during the permit term.
- A Schedule of Compliance, for any applicable requirement that the source is out-of-compliance, must accompany this application.
- The source shall meet the Compliance Schedule in order to assure continuous compliance with all applicable requirements.

Form C-4: Compliance Schedule

Facility Name: _Cheyne Landfill ____
Confidentiality Claim? Yes No (circle one)
Process #: 3____

Applicable Requirement Identifier	Current Compliance Status (In or Out)	Compliance Status over Past Year (Continuous or Intermittent)	Method used to Determine Compliance Status
NSRP-27-CLF-08, Condition 2.1	In	Continuous	Administrative
NSRP-27-CLF-08, Condition 2.11	In	Continuous	Administrative
NSRP-27-CLF-08, Conditions 4.1, 4.2, 5.1, and 5.2.	In	Continuous	Compliance with Cell 2 TAP emission limits based on actual waste acceptance rates for Cell 2, landfill gas generation rates from EPA's LandGEM model, and TAP concentrations in landfill gas (AP-42 default values until site-specific test data are available).

- The source shall continue to comply with all applicable requirements with which it is currently in compliance.
- The source shall meet applicable requirements on a timely basis that become effective during the permit term.
- A Schedule of Compliance, for any applicable requirement that the source is out-of-compliance, must accompany this application.
- The source shall meet the Compliance Schedule in order to assure continuous compliance with all applicable requirements.

Methyl ethyl ketone	78-93-3	7.1	1.27E-01	1110.0
Methyl isobutyl ketone	108-10-1	1.9	4.71E-02	412.6
Perchloroethylene (tetrachloroethylene)	127-18-4	3.7	1.52E-01	1330.3
Toluene	108-88-3	39	8.89E-01	7790.1
Trichloroethylene (trichloroethene)	79-01-6	2.8	9.11E-02	797.7
Vinyl chloride	75-01-4	7.3	1.13E-01	989.2
Xylenes	1330-20-7	12	3.15E-01	2762.0

Notes:

a Based on AP-42 Chapter 2.4 (Municipal Solid Waste Landfills) default TAP concentrations in LFG.

b Potential Fugitive LFG emission rates based on highest projected LFG production rate for Cell 2 (1,320 cubic meters per hour in year 2040).

c Annual emission rate based on 8,760 hours per year.

Summary Report

Landfill Name or Identifier: Cheyne Landfill

Date: Tuesday, October 19, 2010

Description/Comments:

About LandGEM:

First-Order Decomposition Rate Equation:

$$Q_{CH_4} = \sum_{i=1}^{n} \sum_{j=0.1}^{1} kL_o \left(\frac{M_i}{10} \right) e^{-kt_{ij}}$$

Where,

Q_{CH4} = annual methane generation in the year of the calculation (m^3/*year*)

i = 1-year time increment

n = (year of the calculation) - (initial year of waste acceptance)

j = 0.1-year time increment

k = methane generation rate ($year^{-1}$)

L_o = potential methane generation capacity (m^3/*Mg*)

M_i = mass of waste accepted in the i^{th} year (*Mg*)

t_{ij} = age of the j^{th} section of waste mass M_i accepted in the i^{th} year (*decimal years*, e.g., 3.2 years)

LandGEM is based on a first-order decomposition rate equation for quantifying emissions from the decomposition of landfilled waste in municipal solid waste (MSW) landfills. The software provides a relatively simple approach to estimating landfill gas emissions. Model defaults are based on empirical data from U.S. landfills. Field test data can also be used in place of model defaults when available. Further guidance on EPA test methods, Clean Air Act (CAA) regulations, and other guidance regarding landfill gas emissions and control technology requirements can be found at http://www.epa.gov/ttnatw01/landfill/landflpg.html.

LandGEM is considered a screening tool — the better the input data, the better the estimates. Often, there are limitations with the available data regarding waste quantity and composition, variation in design and operating practices over time, and changes occurring over time that impact the emissions potential. Changes to landfill operation, such as operating under wet conditions through leachate recirculation or other liquid additions, will result in generating more gas at a faster rate. Defaults for estimating emissions for this type of operation are being developed to include in LandGEM along with defaults for convential landfills (no leachate or liquid additions) for developing emission inventories and determining CAA applicability. Refer to the Web site identified above for future updates.

Input Review

LANDFILL CHARACTERISTICS

Landfill Open Year	**1994**	
Landfill Closure Year (with 80-year limit)	**2040**	
Actual Closure Year (without limit)	***2040***	
Have Model Calculate Closure Year?	**No**	
Waste Design Capacity		*short tons*

MODEL PARAMETERS

Methane Generation Rate, k	**0.020**	*year -1*
Potential Methane Generation Capacity, L_o	**100**	*m_3 /Mg*
NMOC Concentration	**425**	*ppmv as hexane*
Methane Content	**50**	*% by volume*

GASES / POLLUTANTS SELECTED

Gas / Pollutant #1:	**Total landfill gas**
Gas / Pollutant #2:	**Methane**
Gas / Pollutant #3:	**Carbon dioxide**
Gas / Pollutant #4:	**NMOC**

Gases	Total landfill gas		0.00		
	Methane		16.04		
	Carbon dioxide		44.01		
	NMOC	4,000	86.18		
Pollutants	1,1,1-Trichloroethane (methyl chloroform) -	0.48	133.41		
	1,1,2,2 Tetrachloroethane - HAP/VOC	1.1	167.85		
	1,1-Dichloroethane (ethylidene dichloride) - HAP/VOC	2.4	98.97		
	1,1-Dichloroethene (vinylidene chloride) - HAP/VOC	0.20	96.94		
	1,2-Dichloroethane (ethylene dichloride) - HAP/VOC	0.41	98.96		
	1,2-Dichloropropane (propylene dichloride) - HAP/VOC	0.18	112.99		
	2-Propanol (isopropyl alcohol) - VOC	50	60.11		
	Acetone	7.0	58.08		
	Acrylonitrile - HAP/VOC	6.3	53.06		
	Benzene - No or Unknown Co-disposal - HAP/VOC	1.9	78.11		
	Benzene - Co-disposal - HAP/VOC	11	78.11		
	Bromodichloromethane - VOC	3.1	163.83		
	Butane - VOC	5.0	58.12		
	Carbon disulfide - HAP/VOC	0.58	76.13		
	Carbon monoxide	140	28.01		
	Carbon tetrachloride - HAP/VOC	4.0E-03	153.84		
	Carbonyl sulfide - HAP/VOC	0.49	60.07		
	Chlorobenzene - HAP/VOC	0.25	112.56		
	Chlorodifluoromethane	1.3	86.47		
	Chloroethane (ethyl chloride) - HAP/VOC	1.3	64.52		
	Chloroform - HAP/VOC	0.03	119.39		
	Chloromethane - VOC	1.2	50.49		
	Dichlorobenzene - (HAP for para isomer/VOC)	0.21	147		
	Dichlorodifluoromethane	16	120.91		
	Dichlorofluoromethane - VOC	2.6	102.92		
	Dichloromethane (methylene chloride) - HAP	14	84.94		
	Dimethyl sulfide (methyl sulfide) - VOC	7.8	62.13		
	Ethane	890	30.07		
	Ethanol - VOC	27	46.08		

Pollutant Parameters (Continued)

		Gas / Pollutant Default Parameters:		*User-specified Pollutant Parameters:*	
	Compound	Concentration (*ppmv*)	Molecular Weight	Concentration (*ppmv*)	Molecular Weight
Pollutants	Ethyl mercaptan (ethanethiol) - VOC	2.3	62.13		
	Ethylbenzene - HAP/VOC	4.6	106.16		
	Ethylene dibromide - HAP/VOC	1.0E-03	187.88		
	Fluorotrichloromethane - VOC	0.76	137.38		
	Hexane - HAP/VOC	6.6	86.18		
	Hydrogen sulfide	36	34.08		
	Mercury (total) - HAP	2.9E-04	200.61		
	Methyl ethyl ketone - HAP/VOC	7.1	72.11		
	Methyl isobutyl ketone - HAP/VOC	1.9	100.16		
	Methyl mercaptan - VOC	2.5	48.11		
	Pentane - VOC	3.3	72.15		
	Perchloroethylene (tetrachloroethylene) - HAP	3.7	165.83		
	Propane - VOC	11	44.09		
	t-1,2-Dichloroethene - VOC	2.8	96.94		
	Toluene - No or Unknown Co-disposal - HAP/VOC	39	92.13		
	Toluene - Co-disposal - HAP/VOC	170	92.13		
	Trichloroethylene (trichloroethene) - HAP/VOC	2.8	131.40		
	Vinyl chloride - HAP/VOC	7.3	62.50		
	Xylenes - HAP/VOC	12	106.16

APPENDIX C

Inapplicable Requirements

TABLE C – 1

INAPPLICABLE REQUIREMENTS

Cheyne Landfill
Zillah, Washington

Requirement	Emission Unit	Brief Discussion of Requirement	Basis
40 CFR 60 Subpart IIII	Facility	New Source Performance Standards for stationary compression ignition internal combustion engines	No stationary combustion engines exist at the facility.
40 CFR 60 Subpart Kb	Facility	New Source Performance Standards for Volatile Organic Liquid Storage Vessels	No affected sources at the facility.
40 CFR 72 – 78	Facility	Acid Rain Program	Applies only to certain electric generation and incineration facilities The subject facility does not generate electricity or incinerate waste.
WAC 173-400-050	Facility	Emission Standards for Combustion and Incineration Units	Yakima County does not operate any combustion or incineration units at CLF.
WAC 173-400-070(1) – (8)	Facility	Emission Standards for Certain Source Categories	Yakima County does not operate a wigwam burner, hog fuel boiler, orchard heater, grain elevator, catalytic cracking unit, sulfuric acid plant, or sewage sludge incinerator at CLF.
WAC 173-400-099 and YRCAA Regulation 1, Section 4.01	Facility	Registration Program	As a Title V source, the facility is not subject to the registration program.
WAC 173-400-112	Facility	Requirements for New Sources in Non- Attainment Areas	The CLF not located in a non-attainment area.
WAC 173-400-190	Facility	Requirements for Nonattainment Areas	The CLF is not located in a nonattainment area.
40CFR63 Subpart AAAA	Facility	MSW Landfill NESHAP	Facility is not a major source of HAP emissions and landfill currently emits less than 50 Mg NMOCs per year.
40CFR63 Subpart ZZZZ	Facility	Stationary Reciprocating Internal Combustion Engine NESHAP	No stationary reciprocating internal combustion engines are currently operated at CLF.

TABLE C – 2

INAPPLICABLE REQUIREMENTS

Cheyne Landfill
Zillah, Washington

Requirement	Emission Unit	Brief Discussion of Requirement	Basis
WAC 173-405	Facility	Kraft Pulping Mills	The CLF does not contain a kraft pulping mill.
WAC 173-406	Facility	Acid Rain Regulation	The CLF does not generate electricity.
WAC 173-407	Facility	CO2 Mitigation Program for Thermal Electric Generating Facilities	The CLF does not generate electricity.
WAC 173-410	Facility	Sulfate Pulping Mills	The CLF does not contain a sulfate pulping mill.
WAC 173-415	Facility	Primary Aluminum Plants	The CLF does not contain a primary aluminum plant.
WAC 173-433	Facility	Solid Fuel Burning Devices	The CLF does not operate a solid fuel burning device.
WAC 173-434	Facility	Solid Waste Incinerator Facilities	The CLF does not operate a solid waste incinerator.
WAC 173-490	Facility	Emissions Standards and Controls for Sources Emitting Volatile Organic Compounds (VOC)	The CLF is not located in an ozone non-attainment area.
WAC 173-491	Facility	Emissions Standards and Controls for Sources Emitting Gasoline Vapors	The CLF does not operate a gasoline marketing operation.
